## Peripheral Neuropathy Affects Balance

There are many individuals in our community who suffer with life-limiting Peripheral Nerve Damage, or Peripheral Neuropathy.

Peripheral Neuropathy, in a variety of ways, affects the way the body performs and moves thus negatively affecting balance and stability.

- **Sensory Changes, especially in the feet and lower legs**
- **Altered Proprioception (where your body parts and your body are positioned in time and space)**
- **Muscular Weakness**
- **Gait Abnormalities**
- **Reduced Reflexes**
- **Loss of Protective Sensation**

This is why it is vital for individuals with peripheral neuropathy to work closely with healthcare professionals to develop personalized plans for both managing their condition and addressing balance concerns. **At Life Chiropractic, we can often help these people with our ProBalance360 and FDA cleared Vestibular Neuropathy Therapy** in association with **Prosoft Mechanical Motion Therapy**. The metrics enable the acquisition of base line data which enables the development of rational personalized treatment plans.

**With the use of Prosoft Mechanical Motion Therapy, FDA cleared Vestibular Neuropathy Therapy and ProBalance360** technology, your neuropathways are retrained, improvement in proprioception occurs, movement patterns are improved, and redevelopments in the integrity, strength and range of motion of the joints and muscles are achieved.
